AS/NZS3000:2018 Wiring Rules

Additional Questions

Question 1.

In general, the earthing system of an electrical installation shall include:

- (a) Protective earthing conductors
- (b) Main earthing Conductor
- (c)
- (d) MEN Link
- (e) Earth Electrode
- (f)

Answer:

Wiring Rule No:

Question 2.

Are air-handling systems intended to exhaust and control the spread of fire and smoke considered as a safety service?

Answer:

Wiring Rule No:

Question 3.

The function of the Residual Current Device (RCD) shall be verified by the operation of the integral test device, or by the use of special test equipment. When testing the RCD by means of the integral test device, does this test provide proof that the associated circuit protective earthing conductor is continuous?

Answer:

Wiring Rule No:

Question 4.

What special arrangements must be made before a switchboard can be installed within a storage cupboard?

- (i) Installed in a section of the cupboard separated from other sections
- (ii) Installed at the front of the switchboard section of the cupboard
- (iii) Facing the cupboard access door with insufficient unused space between the switchboard and the cupboard door, when closed, to store extraneous objects in front of the switchboard

- (iv)
-

Wiring Rule No:

Question 5.

What is the minimum permissible clearance above a recessed 50W halogen lamp luminaire?

Answer:

Wiring Rule No:

Question 6

Does a protective earthing conductor have to be provided to a transformer supplying an ELV lighting system?

Answer:

Wiring Rule No:

Question 7

Determine the minimum permissible side clearance between a 35W halogen lamp luminaire and thermal insulation.

Answer:

Wiring Rule No:

Question 8

What do the AS/NZS3000:2018 Wiring Rule require regarding the location of a main switchboard in a multiple electrical installation?

Answer:

Wiring Rule No:

Question 9

What is the maximum permissible temperature for accessible metallic hand held electrical equipment?

Answer:

Wiring Rule No:

Question 10

May a semiconductor (solid state) device be used as a means for isolation purposes?

Answer:

Wiring Rule No:

Question 11

Are rods or pipes permitted to be used as an earth electrode?

Answer:

Wiring Rule No:

Question 12

Is it permissible to locate a domestic switchboard within 1.2 metres of the ground, floor or platform if not located within a cupboard?

Answer:

Wiring Rule No:

Question 13

Is it permissible to install an isolating switch, that is controlling a room heater, on the switchboard at which the room heater final sub-circuit originates?

Answer:

Wiring Rule No:

Question 14

Is it permissible for the earthing or protective bonding conductor to pass through the magnetic circuit of an RCD?

Answer:

Wiring Rule No:

Question 15

The junction of the consumers mains with the conductors of an electricity distribution system or the output terminals of an electricity generating system within a premises, are referred to as the:

Answer:

Wiring Rule No:

Question 16

Is it permissible to use sprinkler pipes, or pipes conveying gas, water, flammable liquid or other metallic non-electrical services as an earthing medium?

Answer:

Wiring Rule No:

Question 17

Apart from a changeover switch specifically installed to allow supply from an alternative supply system, is it permissible to connect an isolator switch between the main switch used to control fire and smoke detection equipment and a switchboard for fire and smoke detection equipment?

Answer:

Wiring Rule No:

Question 18

Is a socket-outlet, installed in a boarding house for the purpose of connecting a fixed electric cooking appliance, required to be protected by a Residual Current Device?

Answer:

Wiring Rule No:

Question 19

The minimum permissible insulation resistance between live and earthed parts of electrical appliances containing sheathed heating elements is?

Answer:

Wiring Rule No:

Question 20.

Is it permissible to bond pipes conveying gas to metallic electrical service enclosures?

Answer:

Wiring Rule No:

Question 21.

Explain how the earthing conductor is selected when a multiphase circuit comprises different size active conductors.

Answer:

.....

Wiring Rule No:

Question 22.

In general, the minimum permissible cross-sectional area of insulated copper conductors used for the wiring of socket-outlets is:

Answer:

Wiring Rule No:

Question 23.

Extra low AC voltage is a voltage rating not exceeding volts.

Wiring Rule No:

Question 24.

Is a lamp considered to be an 'accessory'?

Answer:

Wiring Rule No:

Question 25.

Where the active conductor of a circuit comprises a number of conductors connected in parallel, the earthing conductor shall be determined:

Answer:

.....

Wiring Rule No:

Question 26.

Is it permissible to have a single functional switch that is to be used for the control of associated cooking appliances, such as a split-level range combination, so long as it is installed in the same room as the cooking appliance?

Answer:

Wiring Rule No:

Question 27.

Where an electrically operated fence is connected directly or indirectly to electricity supply mains, such connections shall be made only through a:

Answer:

Wiring Rule No:

Question 28.

The cross-sectional area of a copper main earthing conductor shall be not less than:

Answer:

Wiring Rule No:

Question 29.

In general, the minimum permissible insulation resistance between live and earthed parts of an electrical installation or parts thereof is?

Answer:

Wiring Rule No:

Question 30.

Is it permissible to connect the neutral conductor of a control circuit associated with the operation of a fire-pump directly to the coil of the operating device within the starter?

Answer:

Wiring Rule No:

Question 31.

The minimum size of an earthing conductor incorporated with associated live conductors in a sheathed multi-core cable shall be:

Answer:

Wiring Rule No:

Question 32.

Is it permissible to connect a switch in the neutral conductor of a fire-pump control circuit?

Answer:

Wiring Rule No:

Question 33.

The maximum demand of an installation may be assessed where:

- I. the electrical equipment operates under conditions of fluctuating or intermittent loading, or a definite duty cycle: or
- II.
- III special types of occupancy exist.

Wiring Rule No:

Question 34

Is an aerial earthing conductor required to be insulated?

Answer:

Wiring Rule No:

Question 35

In absence of specific data, when determining the current carrying capacity of cables to be installed in air, the reference ambient temperature in Australia may be assumed as:

Answer:

Wiring Rule No:

Question 36

Where a main earthing conductor is able to be readily disconnected from the earth electrode, it is a requirement that where the main earthing conductor is attached to the earth electrode, a permanent and legible sign shall be attached warning against the disconnection.

The sign shall read:

Answer:

Wiring Rule No:

Question 37

Is it permissible to connect an over-temperature protective device between the fire-pump motor controller and the fire-pump motor?

Answer:

Wiring Rule No:

Question 38

The insulation resistance test between live and earthed parts of an electrical installation or parts thereof shall be not less than MΩ.

Answer:

Wiring Rule No:

Question 39

The overload characteristics of over-current protective devices provided on circuits supplying fire-pump motors shall have an inverse time characteristic and be rated, or in the case of circuit-breakers set, to –

(i)

(ii)

Wiring Rule No:

Question 40

Is it permissible to use a type ‘S’ RCD with a rated residual current in the range of 100mA to 300mA as a main switch in a domestic installation?

Answer:

Wiring Rule No:

Question 41

What is the minimum permissible size of a main earthing conductor if it is to comprise of aluminium conductors?

Answer:

Wiring Rule No:

Question 42

Where socket-outlets or lighting points that are not RCD protected are to be replaced, is it a requirement of AS/NZS3000:2018 Wiring Rules that the replacement socket-outlet or lighting point be RCD protected?

Answer:

Wiring Rule No:

Question 43

In general, earth electrodes shall be located in a position:

(a)

(b)

(c)

Wiring Rule No:

Question 44

Conductors of fire and smoke detection equipment within a switchboard shall be segregated from all other wiring systems by suitable barriers or a physical separation of at least mm.

Answer:

Wiring Rule No:

Question 45

What minimum separation do the AS/NZS3000 Wiring Rules recommend regarding the separation between the electrical earthing electrode and nearby gas services?

Answer:

Wiring Rule No:

Question 46

The resistance of the main earthing conductor of an electrical installation shall be not more than:

Answer:

Wiring Rule No:

Question 47

Aerial earthing conductors shall be identified at each end of the run either by the letter 'E' or by:

Answer:

Wiring Rule No:

Question 48

What requirement is necessary for sub-mains or final sub-circuits having a rating exceeding 100 per phase?

Answer:

Wiring Rule No:

Question 49

A device providing protection against overload shall be installed at the origin of every circuit. Where else is it a requirement that such a protection device be placed?

Answer:

Wiring Rule No:

Question 50

If a duct or trunk is divided into separate channels by means of fixed and continuous barriers that provide effective segregation, is it permissible to install conductors of fire and smoke detection equipment in one channel and conductors of a general wiring system in the other?

Answer:

Wiring Rule No:

Question 51

Strip-type earth electrodes buried in a horizontal trench shall be laid at a depth having not less than _____ metre cover and with a minimum horizontal length of 3 metres.

Answer:

Wiring Rule No:

Question 52

The AS/NZS3000:2018 Wiring Rules require, that after completion or in association with the visual inspection of the electrical installation, a sequence of tests be carried out. If the electrical installation fails one of the prescribed tests, what are the following requirements?

Answer:

Wiring Rule No:

Question 53

An area in which explosive atmosphere is present, or may be expected to be present, in quantities such as to require special precautions for the construction, installation and use of electrical equipment, is referred to as:

Answer:

Wiring Rule No:

Question 54

Is it a requirement that the connection of the main earthing conductor to the earth electrode within an electrical installation be accessible?

Answer:

Wiring Rule No:

Question 55

Is it permissible to install a switchboard in a cupboard containing a fire-hose reel?

Answer:

Wiring Rule No:

Question 56

Where consumers mains are not protected on the supply side by short-circuit protective devices, the MEN link shall have a cross sectional area not less than that of the:

Answer:

Wiring Rule No:

Question 57

Is it permissible for a main switch controlling fire and smoke detection equipment to also control other general electrical equipment within the same electrical installation?

Answer:

Wiring Rule No:

Question 58

To assist in the prevention of the spread of fire, openings in a switchboard used for the entering of wiring systems should be

Answer:

Wiring Rule No:

Question 59

Is it a requirement of AS/NZS3000:2018 that the location of the earthing electrode be identified at the main switchboard?

Answer:

Wiring Rule No:

Question 60

If the MEN link is to be insulated, it shall be covered with an insulation that has the colouring of:

Answer:

Wiring Rule No:

Question 61

What are the requirements of AS/NZS3000:2018 regarding the relationship of switches, circuit breakers, fuses and RCDs to the various sections of the installation they protect?

Answer:

.....

Wiring Rule No:

Question 62

What are the requirements of AS/NZS3000:2018 wiring rules regarding the control of lifts specifically required to operate for fire-fighting or other emergency purposes and other general passenger lifts?

Answer:

Wiring Rule No:

Question 63.

What is the maximum number of main switches that may be used to control fire and smoke detection equipment, evacuation equipment and lifts?

Answer:

Wiring Rule No:

Question 64.

Terminals of bars, links, circuit breakers, fuses and other electrical equipment mounted on a switchboard shall be marked or arranged to identify the corresponding active and neutral connection for each circuit.

The terminals for the connection of the MEN link and for the main neutral conductor shall be legibly and indelibly marked at the main neutral bar or link.

This marking is not necessary where:

(a)

(b)

Wiring Rule No:

Question 65

Is an appliance having a mass exceeding 18kg and not provided with a carrying handle, considered to be a stationary appliance?

Answer:

Wiring Rule No:

Question 66

What special requirements are necessary regarding the opening of a door of a room dedicated to a switchboard?

Answer:

Wiring Rule No:

Question 67

Is it permissible to use neutral screened cables as aerial conductors?

Answer:

Wiring Rule No:

Question 68

The minimum size of a consumer's mains, sub mains or final sub-circuit neutral conductor when installed as part of a single-phase circuit, shall have a current-carrying capacity of not less than:

(i)

(ii)

Wiring Rule No:

Question 69

Is it permissible to control parts of an electrical installation supplying fire and smoke detection equipment from the general light & power main switch?

Answer:

Wiring Rule No:

Question 70

Where fixed electrical equipment is installed adjacent to flammable materials, what provisions must be made to reduce the likelihood of a fire hazard?

(a)

.....

(b)

.....

(c)

.....

.....

Wiring Rule No:

Question 71

Is it a requirement that the operation of the switch, incorporated in a pendant-type socket-outlet attached to a flexible cord, interrupt the neutral conductor when operated?

Answer:

Wiring Rule No:

Question 72

Is it permissible to use a 12mm stainless steel rod as an earthing electrode?

Answer:

Wiring Rule No:

Question 73

Unless enclosed in a suitable wiring enclosure, flexible cords used as fixed wiring shall be of the:

Answer:

Wiring Rule No:

Question 74

Where electrical equipment is connected to the fixed wiring by a connection in the form of a plug and socket-outlet, appliance plug or similar connecting device, any connection of exposed conductive parts to earth shall be:

Answer:

.....

.....

.....

Wiring Rule No:

Question 75

When determining the voltage drop of a final sub-circuit consisting of only socket-outlets, how is the current value determined that should be used in the formula:

$$V_d = \frac{L \times I \times V_c}{1000}$$

Answer:

Wiring Rule No:

Question 76

Dust hazardous areas are those areas which are hazardous because of the presence of:

Answer:

.....

Wiring Rule No:

Question 77

Are the exposed conductive parts of electrical equipment supplied by an SELV system required to be earthed?

Answer:

Wiring Rule No:

Question 78

What specific earthing requirements are necessary when earthing the exposed conductive parts of metallic wiring enclosures?

Answer:

Wiring Rule No:

Question 79

May double insulated low voltage cables be enclosed in the same wiring enclosure as extra low voltage cables?

Answer:

Wiring Rule No:

Question 80

Are the metal supports of aerial conductors that are separated from the aerial conductors by double insulation, required to be earthed?

Answer:

Wiring Rule No:

Question 81

When an RCD is incorporated into a socket-outlet, the RCD shall be required to interrupt. _____

Answer:

Wiring Rule No:

Question 82

Is it permissible to install a socket-outlet within the classified zone 2 area of a bath location?

Answer:

Wiring Rule No:

Question 83

AS/NZS3000:2018 Wiring Rules acknowledges two recognized hazardous areas. The two general recognized hazardous areas are:

(a)

(b)

Wiring Rule No:

Question 84

Where required, wiring systems installed underground shall be identified by an _____ coloured marker tape complying with AS/NZS2648.1

Answer:

Wiring Rule No:

Question 85

Neutral-screened-cables are recognised as underground wiring systems. However, is it permissible to chase a neutral-screened cable into rock with no enclosure?

Answer:

Wiring Rule No:

Question 86

Single-core cables, enclosed in lead or other non-ferrous metal sheathing and laid in trefoil, may be used for alternating currents only where one of the following arrangements is employed:

(i)

.....

(ii)

.....

Wiring Rule No:

Question 87

What are the requirements of AS/NZS3000:2018 Wiring Rules regarding the bending of rigid conduit?

Answer:

.....

Wiring Rule No:

Question 88

Is it permissible to install electrical equipment with an IP rating of IPX7 within a classified zone 0 area of a shower location?

Answer:

Wiring Rule No:

Question 89

Under the scope of emergency systems, is an escalator considered to be a lift?

Answer:

Wiring Rule No:

Question 90

Is it permissible to use a socket-outlet rated at 15A and have it controlled via a switch rated at 10A?

Answer:

Wiring Rule No:

Question 91

Is it a requirement that unattended submersible pump motors with a rating of 2.25kW be provided with over-temperature protection?

Answer:

Wiring Rule No:

Question 92

Is it permissible to install a metallic type lamp-holder in a refrigerated room?

Answer:

Wiring Rule No:

Question 93

DC motors supplied from a two-wire supply with one line earthed, shall have over-temperature protection in not less than _____ conductor/s.

Answer:

Wiring Rule No:

Question 94

If conductors or cables, including flexible cables and flexible cords, are to be threaded through conduits, is it mandatory to have the ends of the conduit bushed?

Answer:

Wiring Rule No:

Question 95

Is it permissible to install a socket-outlet for the purpose of pool equipment within the classified zone 1 of a swimming pool area provided that it is mounted 300mm above ground level and 1.5 metres from the internal rim of the swimming pool?

The socket-outlet has an IPX5 rating and the circuit is to be protected by a Residual Current Device (RCD) with a maximum rated residual current of 30mA.

Answer:

Wiring Rule No:

Question 96

Those conductors between the Point of Supply and the Main Switchboard are referred to as the:

Answer:

Wiring Rule No:

Question 97

It is recommended by AS/NZS3000:2018 Wiring Rules that a visual inspection is carried out on the consumer's mains portion of the electrical installation. The visual inspection should take into account:

(i)

(ii)

(iii)

(iv)

(v)

(vi)

Wiring Rule No:

Question 98

The minimum permissible size of high voltage aluminium earthing conductors is:

Answer:

Wiring Rule No:

Question 99

Is it permissible to install Earth Sheath Return (ESR) wiring systems in areas classified as hazardous?

Answer:

Wiring Rule No:

Question 100

Wiring systems installed below a roof shall not be installed through any space formed between the:

Answer:

Wiring Rule No:

Question 101

In general, all capacitors with a value greater than _____ uF, shall be provided with a discharge path.

Answer:

Wiring Rule No:

Question 102

Is it permissible to install a light switch within a classified zone 0 area of a bath location?

Answer:

Wiring Rule No:

Question 103

Need to choose a new question

Question 104

Is it permissible to install a socket-outlet for the purpose of supplying power to an electric BBQ within the zone 1 classification of a swimming pool?

Answer:

Wiring Rule No:

Question 105

What specific earthing requirements are necessary, when earthing the metallic sheathing or armouring surrounding cables or cords in a circuit?

Answer:

Wiring Rule No:

Question 106

Are wiring systems installed on the underside of a ceiling deemed likely to be disturbed?

Answer:

Wiring Rule No:

Question 107

Determine the maximum value of earth fault-loop impedance, in ohms, if a 230V circuit is protected by a type 'c' 20A circuit-breaker at a 0.4 sec. disconnection time.

Answer:

Wiring Rule No:

Question 108

A fault-current limiter is designed or selected to limit the:

Answer:

Wiring Rule No:

Question 109

Are switches permitted to be connected in the neutral conductor of an Earth Sheath Return (ESR) System?

Answer:

Wiring Rule No:

Question 110

It is recommended by AS/NZS3000:2018 Wiring Rules that a visual inspection is carried out on the earthing portion of the electrical installation. The visual inspection should take into account:

- (i)
- (ii)
- (iii)
- (iv)
- (v)
- (vi)
- (vii)
- (viii)

Wiring Rule No:

Question 111

Each electricity supply characteristic changer shall be provided with an isolating switch, which must be under:

Answer:

Wiring Rule No:

Question 112

Is it permitted to install a double-insulated luminaire in a classified zone 2 area of a shower base location?

Answer:

Wiring Rule No:

Question 113

Any change from one type of wiring enclosure to another shall be made by means of a suitable device that provides for the complete protection of the conductor insulation and for the continuity of conductive wiring enclosure; or

_____.

Answer:

Wiring Rule No:

Question 114

Is it permissible to use a solid copper conductors as an earthing conductor?

Answer:

Wiring Rule No:

Question 115

Apart from motors incorporated in an item of electrical equipment, an electric motor having a rating exceeding _____ W shall be provided with control equipment incorporating means of protection against overload of the motor.

Answer:

Wiring Rule No:

Question 116

Where a capacitor is controlled by a circuit-breaker, the conductors connected to the capacitor shall have a current-carrying capacity not less than –
_____ % of the rated current of the capacitor; or
the setting of the circuit-breaker; whichever is the greater.

Answer:

Wiring Rule No:

Question 117

Is it permissible to use a solid aluminium conductors as an earthing conductor?

Answer:

Wiring Rule No:

Question 118

The minimum permissible size of an aluminium aerial conductor ismm².

Answer:

Wiring Rule No:

Question 119

Steel conductors installed as aerial conductors shall have not less than strands.

Answer:

Wiring Rule No:

Question 120

Is it mandatory to protect electric heating cable systems with Residual Current Devices that have a maximum rated residual current of 30mA?

Answer:

Wiring Rule No:

Question 121

What provisions are required by AS/NZS3000:2018 Wiring Rules regarding the general position of location of an earthing electrode?

Answer:

.....

Wiring Rule, No:

Question 122

Where an extra-low voltage supply is earthed at the point of supply, fuses or circuit breakers shall be installed:

Answer:

Wiring Rule No:

Question 123

Is it a requirement for a socket-outlet that is switched by the insertion and withdrawal of the plug, to have an additional individual controlling switch?

Answer:

Wiring Rule No:

Question 124

Is it permissible to make a soldered joint in an aerial conductor under tension?

Answer:

Wiring Rule No:

Question 125

Thermal insulating material shall be separated from extra-low voltage dichroic lamps by not less than _____ mm.

Answer:

Wiring Rule No:

Question 126

Is it permissible to run bare aerial conductors above a classified zone 2 area of an in-ground swimming pool?

Answer:

Wiring Rule No:

Question 127

Electrical equipment installed within the classified zone 1 area of a water fountain shall have a minimum IP rating of.....

Answer:

Wiring Rule No:

Question 128

Are metallic luminaries installed outdoors on timber poles and not in an earthed situation, required to be earthed?

Answer:

Wiring Rule No:

Question 129

Is it permissible to sleeve the ends of an earthing conductor to indicate a live conductor?

Answer:

Wiring Rule No:

Question 130

Over-temperature cut-outs, installed in un-vented water heaters, shall operate directly:

Answer:

and

Wiring Rule No:

Question 131

Is it permissible to install socket-outlet in the confines of a sauna heater?

Answer:

Wiring Rule No:

Question 132

Is it permissible to use single-core cables armoured with steel wire or tape for AC circuits?

Answer:

Wiring Rule No:

Question 133

What is the minimum permissible Cross Sectional Area of conductors used in an Earth Sheath Return (ESR) wiring system?

Answer:

Wiring Rule No:

Question 134

The drop in voltage at any point in an extra low voltage electrical installation shall not exceed % of the nominal value when all live conductors are carrying the circuit operating current.

Answer:

Wiring Rule No:

Question 135

Is it permissible for sub-main and sub-circuit protective earthing conductors to be directly connected to any point on the main earthing conductor?

Answer:

Wiring Rule No:

Question 136

Are cables, enclosed and embedded in a concrete floor, slab or pad considered to be an underground wiring system?

Answer:

Wiring Rule No:

Question 137

Is it mandatory to have over-current protection in all extra-low voltage circuits?

Answer:

Wiring Rule No:

Question 138

Is it permissible to make a cable joint in a neutral screened aerial cable under tension?

Answer:

Wiring Rule No:

Question 139

Is it permissible to use the low voltage main switch of an electrical installation to control the extra-low voltage portion of the same installation?

Answer:

Wiring Rule No:

Question 140

Are aluminium sheath conductors permitted to be used as a combined earthing and neutral conductor?

Answer:

Wiring Rule No:

Question 141

Is it permissible to use a socket-outlet without a controlling switch, for the purpose of supplying a fixed appliance rated at not more than 10A and is not readily accessible for other purposes?

Answer:

Wiring Rule No:

Question 142

Capacitors and electrical equipment containing capacitors shall be provided with a warning notice containing information similar to the following –

Warning: “.....
”

Wiring Rule No:

Question 143

Is it permissible for a protective earthing conductor originating at a distribution switchboard to be used for the earthing of electrical equipment that is supplied from another distribution switchboard?

Answer:

Wiring Rule No:

Question 144

Is it a requirement of AS/NZS3000:2018 Wiring Rules that all water heaters be provided with an independent isolating switch?

Answer:

Wiring Rule No:

Question 145

Is it permissible to use a programmable control system as an isolating switch for an electricity supply characteristic changer?

Answer:

Wiring Rule No:

Question 146

Would cables installed in conduit directly under a concrete slab on the ground, considered to be underground wiring?

Answer:

Wiring Rule No:

Question 147

The origin of the sub-mains is deemed to be at the connecting devices of the neutral bar or link or at the load terminals of the circuit protective devices provided within or on a switchboard specifically for the connection of the sub-mains. The termination of the sub-mains is deemed to be at:

Answer:

Wiring Rule, No:

Question 148

In an electrical installation that has the Multiple Earthed Neutral (MEN) System of earthing, is a neutral conductor considered to be live?

Answer:

Wiring Rule No:

Question 149

Is the MEN connection at the neutral bar of an electrical installation considered to be a live part?

Answer:

Wiring Rule No:

Question 150

The impedance of the fault-current loop (active-to-earth loop) starting and ending at the point-of-earth fault, is referred to as the:

Answer:

Wiring Rule No:

Question 151

A light is installed 2.4 metres from a concrete floor in a lounge room. Is the light classified as being in an earthed situation?

Answer:

Wiring Rule No:

Question 152

Is it permitted for a functional switch to be incorporated in the apparatus?

Answer:

Wiring Rule No:

Question 153

Is it a requirement to earth metallic supports that are used for aerial conductors where the supports are out of arms reach?

Answer:

Wiring Rule No:

Question 154

Is it permissible to use a functional switch to control several items of apparatus if the items of apparatus are intended to operate simultaneously?

Answer:

Wiring Rule No:
