

Week 1 Content Schedule

7 days of scripts, shot lists & captions for building StandAid's audience from zero

How to use this pack: film in order through the week. Screen recordings can be done on desktop (QuickTime / OBS / built-in screen recorder) or mobile browser. Talking-to-camera pieces just need your phone — natural light, no fancy setup. Post the same file to Instagram Reels and Facebook at the same time; don't duplicate the editing effort.

Keep every video under 30 seconds at this stage. You're building a hook library, not tutorials. Track saves and shares (not just likes) — that's your signal for what to boost with paid later.

Day	Format	Focus
Monday	Talking to camera	Founder hook — why StandAid exists
Tuesday	Screen recording	Live demo — real compliance question
Wednesday	Skit / relatable	Pain point — the problem before the app
Thursday	Screen recording	Second demo — apprentice-relevant question
Friday	Talking to camera (2 people)	Behind the build — you & Cassie
Saturday	Screen recording	Feature tease — learning / exam mode
Sunday	Repurpose	Re-cut and repost the week's best performer

Page break — full scripts follow on the next page.

MONDAY

FOUNDER HOOK

“I built this because I was sick of it”

Goal: Establish you as a real electrician, not a marketing account. Trust before product.

SCRIPT

“Ten years as a sparkie — industrial, commercial, substations — and I was still standing on a ladder googling AS/NZS numbers halfway through a job.”

“So me and my partner built an app that just answers it. No PDFs, no digging. StandAid.”

“If you're a tradie who's sick of the same thing, stick around — I'll show you how it works this week.”

HOW TO FILM IT

Film on your phone, on-site or in the ute — wherever feels natural. Vertical, natural light, no mic needed. Do 3–4 takes and pick whichever one sounds least rehearsed, even if it's not the “cleanest” one. Keep it to 20–25 seconds total.

CAPTION

10 years on the tools. Still got sick of digging through standards on a ladder. So I built the fix. ■■ Follow along this week as I show you how StandAid actually works. #electrician #tradie #ausparkie #standaid

TUESDAY

LIVE DEMO

Real question, real answer, in seconds

Goal: Prove the core value prop in under 20 seconds — the demo IS the ad.

SCRIPT

(Voiceover, calm and direct — record separately or live while screen recording)

“Quick one — minimum IP rating for an outdoor switchboard?”

(type the question into StandAid on screen)

“There it is. That's it. That's the whole app.”

HOW TO FILM IT

Screen record the StandAid web app (desktop: QuickTime/OBS/built-in recorder, or your phone's screen record if testing on a mobile browser). Type the question live, let the answer appear on screen — don't cut around the wait, that's the proof. Add your voiceover after if it's cleaner. Keep total length under 20 seconds.

CAPTION

No more digging through PDFs on-site. Ask, get the answer, get back to work. #electrician #ausparkie #standards #tradielife

WEDNESDAY

PAIN POINT

POV: mid-job, can't remember the number

Goal: Build relatability before showing the product again — pain point content travels further than demos.

SCRIPT

(No app shown yet — just you, exaggerated frustration)

“POV: you're mid-job and can't remember if it's 3000 or 3760 that covers this.”

(scrolling through phone, flipping through paperwork, sighing, checking the time)

Optional text overlay: “Every. Single. Time.”

HOW TO FILM IT

Raw phone footage works fine — this one doesn't need polish, relatability beats production value here. If you want a stylised cut later, Higgsfield can punch it up, but don't overthink this one. 15–20 seconds.

CAPTION

Tell me you're a tradie without telling me you're a tradie ■■ #electrician #tradielife #ausparkie #relatable

THURSDAY

LIVE DEMO

Second demo — apprentice angle

Goal: Reach a second audience segment (apprentices/upskillers) with the same proven format as Tuesday.

SCRIPT

(Same format as Tuesday — becomes a recognisable series)

“What's the RCD requirement for this circuit again?”

(type into StandAid, answer appears)

“That's the one apprentices ask me about constantly. Now it's one search away.”

HOW TO FILM IT

Reuse Tuesday's exact filming process — same framing, same pacing — so it reads as “StandAid Answers” episode 2. Consistency here matters more than variety.

CAPTION

Apprentices — this one's for you. Stop guessing, start checking. #apprentice #electrician #ausparkie #standaid

FRIDAY

BEHIND THE BUILD

You + Cassie — why this exists

Goal: Deepen trust. This one isn't for conversions — don't force a CTA.

SCRIPT

(Casual back-and-forth, not scripted word-for-word — use these as talking points)

KYLE: “So why'd we actually start building this?”

CASSIE: “[genuine answer — what you saw Kyle dealing with, or the gap you both noticed]”

KYLE: “And what's coming next — the learning feature, the tools suite...”

CASSIE: “[quick, honest answer — keep it natural, don’t oversell]”

HOW TO FILM IT

Sit down together, phone propped up, just talk like you would over dinner. Film 60–90 seconds of real conversation, then cut it down to the best 30–45 seconds in editing. Resist the urge to add a hard sell at the end — this post’s job is trust, not signups.

CAPTION

Why we’re building StandAid — in our own words. More to come. #buildinpublic #tradie #startup #ausparkie

SATURDAY

FEATURE TEASE

The learning / exam feature

Goal: Show there’s more than a lookup tool — plant the seed for apprentices and upskillers.

SCRIPT

(Voiceover over screen recording)

“This is how you actually learn the standards — not just look them up.”

(show a quiz question popping up in the app, answer it on screen)

“Right or wrong, you’ll know exactly why.”

HOW TO FILM IT

Same screen recording process as Tuesday/Thursday. Show one question, one answer, one moment of feedback (correct/incorrect). Keep it tight — 15–20 seconds.

CAPTION

Not just answers — actual learning. Built for apprentices who want it to stick. #apprentice #electrician #ausparkie #standaid

CTA: “Link in bio if you want early access.”

SUNDAY

REPURPOSE

Re-cut your best performer

Goal: Extend reach on whatever actually worked — no new filming required.

SCRIPT

No new script — this is a repackaging day.

HOW TO FILM IT

Look back at Monday–Saturday’s posts. Find whichever got the most saves/shares (not just likes — that’s the real signal). Re-cut it slightly: new caption, add text overlay if it didn’t have one, or flip a static post into a Reel (or vice versa). Repost. This is purely about extending reach on something already proven, not creating something new.

CAPTION

(Write a fresh caption for the re-cut — don’t just duplicate the original post.)

Next step: once you've got a week of data, look at saves/shares per post to decide what's worth boosting with a small paid budget — boost proven content, don't build ads from scratch.
